Software developer with 2 years at IBM shipping enterprise product features; following a period of caregiving and career transition, now specializing in data science and AI through applied project work and a competitive fellowship.

SKILLS

Technologies: Python, SQL, Pandas, Java, JavaScript, ReactJS, Next.js, HTML/CSS, TypeScript, Git, REST

Data Analysis/AI: Statistics, Machine Learning, AI Integration, Data Visualization, Reporting, Data Quality, Predictive Modeling

Software Development: Agile, CI/CD, SDLC, UI/UX, Agentic Workflow, Claude Code, AI-Assisted Development

Other: Bilingual English/Tagalog

PROJECTS

CNN Music Genre Classification | Capstone Project, Synchrony Skills Academy at TKH

Jul 2026

- Led the team and worked hands-on across the full project from ticket creation, PR reviews, and CI/CD via GitHub to database design, all culminating in a live FastAPI + JS demo app where users upload a track and get the model's top 3 genre predictions.
- Built an end-to-end data pipeline in Python and PostgreSQL, transformed 1,000 raw audio files into log-mel spectrograms, wrote SQL joins/aggregations to verify data quality, and trained a 3-block CNN to classify 10 genres, reaching 30% test accuracy, using Claude Code to accelerate development throughout.

Everything Dough AI (AI Chatbot & CRM Agent) | AI for Impact Hackathon, Synchrony Skills Academy at TKH

May 2026

- Led team strategy, prompt engineering, and presentation for a live deployed AI product for a small business, presented to external judges as part of CT Tech Hub's AI Solutions for Small Business initiative.
- Designed two AI systems to eliminate manual bottlenecks: Lexi, a conversational booking chatbot with real-time Google Calendar integration, and Crust, an AI agent surfacing customer segmentation, pipeline analytics, and churn risk flags. Used live by nearly 50 attendees, exhausting the API token budget on the spot.

Financial Fraud Detection Analysis

Apr 2026

- Analyzed 6M+ bank transactions to build an ensemble classifier (96% precision, AUC 0.9972); engineered 3 top predictive features from EDA, produced correlation heatmaps, distribution plots, and ROC-AUC visualizations, and tuned the decision threshold from 0.50 to 0.30 to improve recall to 77%, documenting data quality trade-offs throughout.

PROFESSIONAL EXPERIENCE

The Knowledge House | Data Science Fellow

Jan – July 2026

- Advancing data science skills through applied project work and labs, building and iterating on ML models in Python and SQL, covering feature engineering, hyperparameter tuning, statistics, and hands-on AI integration.
- Producing stakeholder-ready dashboards and reports (correlation heatmaps, distribution plots, ROC-AUC curves, and feature importance charts) to translate them into actionable business insights, documenting data quality decisions and analytical trade-offs throughout.

Training and eTracking Solutions | Software Developer (Contract Work)

Jun – July 2026

- Developed full-stack features (Next.js/TypeScript/AWS) for a healthcare LMS serving 60K+ users, leveraging agentic AI workflows with Claude Code to accelerate delivery and maintain code quality through peer reviews and collaborative PRs, including a 2900-course state-compliance-driven catalog and a large-scale B2B/D2C migration.

Doctors Eye Center | Optical Technician

May 2025 – Mar 2026

- Created structured documentation to standardize patient workflows; identified and reconciled operational gaps to improve turnaround time and processed lab orders and insurance claims accurately.

IBM | Software Developer

Jun 2021 – May 2023

IBM Storage Fusion - Guardian Team

- Wrote fetch and transform logic integrating data from multiple sources, Kafka backup/restore messaging and Prometheus metrics via REST APIs in Python, developing and maintaining data pipelines that ensured consistent, accurate operational data delivery.
- Managed Docker images through JFrog Artifactory on RedHat OpenShift, supporting local development deployments and ensuring data governance across environments.

IBM Storage Fusion - Fusion UI Team

- Delivered user-focused ReactJS features by partnering with product management, UI/UX designers, and back-end developers; diagnosed and resolved code issues to ensure software stability, communicating updates to stakeholders across technical and business teams.

IBM Spectrum Protect - Cloud UI Team

- Developed UI features, maintained CI/CD processes and coding standards, presented technical reporting to internal teams and customers, and performed security scans to ensure compliance.

EDUCATION

University of Connecticut - B.S. Computer Science & Engineering, Minor in Mathematics

2021
